Keep in contact everywhere you are, whenever you want!

TheCrumbs has been developed from the beginning thinking about the people that will use it, so we made it the most portable and simplest possible.

Everyone in this era has a smartphone with an Internet connection, and so we thought: why not use this powerful technology? And we not only thought about this, we made it real! Right now, all the people with an Android smartphone can use TheCrumbs, and, in the immediate future, all the iOS owners will join this awesome community.

Designed for your eyes

Our major goal was to design a beautiful, eye pleasant, user interface, so we started to study all the single parts of the application: from the single buttons to the whole ecosystem that will bring the user to the next level of his social lifestyle.

TheCrumbs focus on minimalist and elegant details, bringing all the feature you already know from other apps. Starting from the navigation drawer to the scroll to refresh pages, every single aspect is carefully studied for our users.

The colors chosen for theCrumbs has been chosen based on the meaning and on the feelings that they have on the user. When you use theCrumbs you feel comfortable and sure about what you are doing.
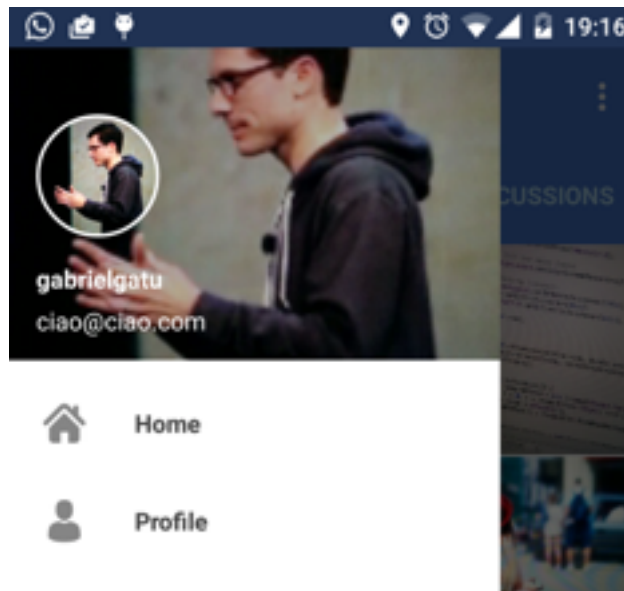

Introduction

Why TheCrumbs?

TheCrumbs tries to rethink the way we are connected to the people. Traditionally we use the social networks to keep in contact with our friends, but doing so we lose the most important part of human being: living together and helping each other.

So, what is it exactly?

TheCrumbs is a mini-social networking application that allows you to meet and talk with other people around you, and not only that!
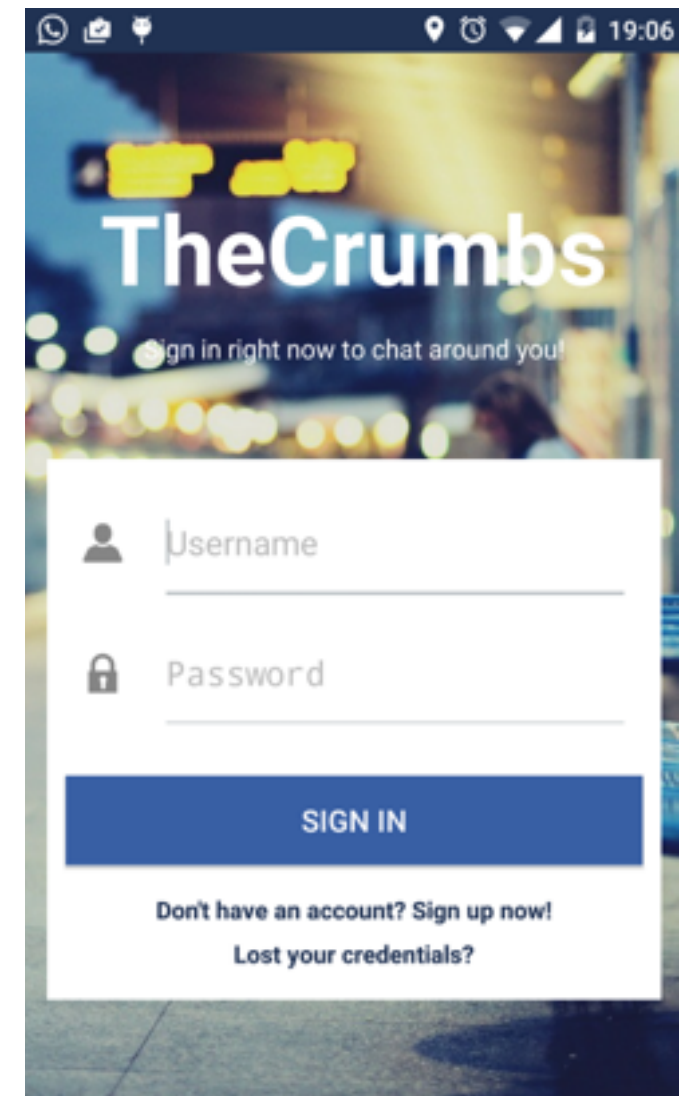

You can also view photos of others posted in that area, or you can even create a new discussion about any argument you want, and, immediately, all the people around you will be at your disposal to answer all the questions you have!

TheCrumbs: more than a simple chat

In a world where the technology is always evolving, where the people are more selfish than ever, we are loosing the most important part: the social aspect.
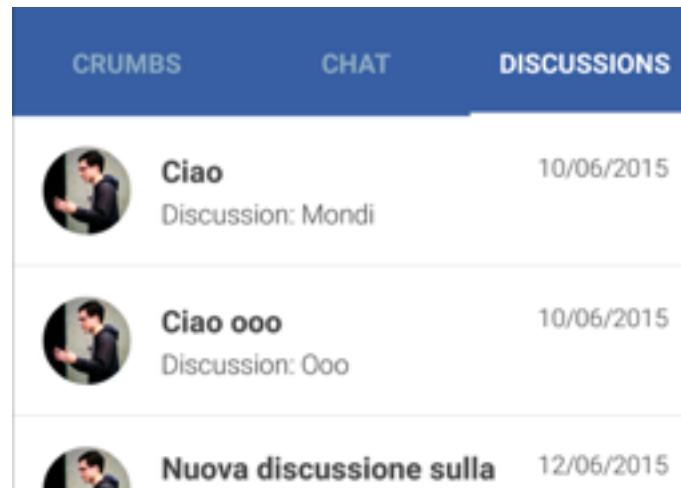

A simple way to meet new people, to ask questions and to receive answers about everything!

Every time you know exactly how many people you have around

Thanks to our sophisticated and extremely precise auto-updating system you know exactly, every time how many people are around you. And, if anyone exits from your area, your app will refresh automatically, so, you will always be informed about the changes happening in your location.

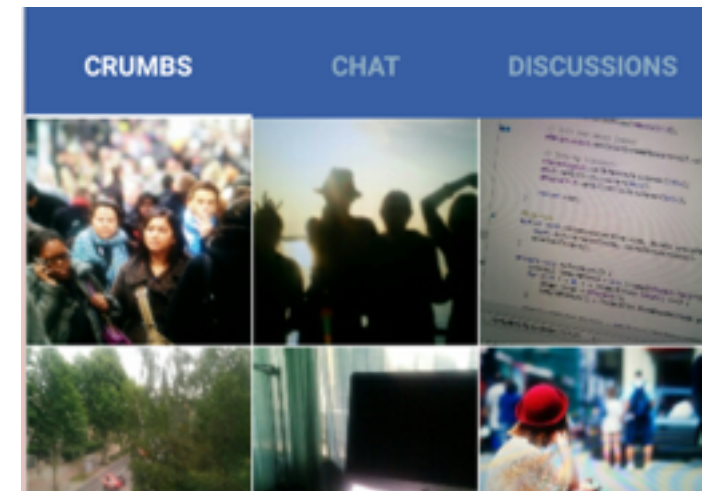

Any discussion in your reach!

Do you have an argument for a discussion, or, maybe, do you just want to publish something that the people near you can see? Awesome, with our discussion tab you can see all the discussions opened in your area, and, if you have your own argument, just open your discussion group! Shortly, hundreds of people will join your group to talk with you!

We tried to design the discussion tab the most clean and simplest possible, focusing on the content and helping you to connect with other people!

Just write a message, we'll do the dirty job for you!

With a nice and clean user interface we allow you to interact from the beginning with the people around you. Do you ave a question? Just type in and send the message, we will figure out all the people near you and send them your message, so, in few seconds, you'll have an answer!

Just leave a crumb!

We make photos every day, we just love to capture the awesome moments of our lives, and we love to spread this optimism with others!

So, we created the crumbs tab! A place where you can deposit your personal moment of glory, and see the moment of glory of others! Just make a photo and send it with the ok button! In few seconds, all the people, present and future, will see your photo and feel your feelings….. And why not!? Make the same thing!

Auto-update system that keeps track of your movement

Why we need an auto-update system?

We walk a lot, and we want to have precise informations about the things around us, we just don't want to have random people inside the chat. So we developed an auto-updating system that keeps track of your movement and updates the server every few seconds with your informations!

So, how it works?

You don't have to worry about anything, when you download the app you already have an auto-updating system built in, it will refresh the server informations with your data, keeping track of all your movements! But don't worry about your privacy, all the data is temporary and also, sincerely, we, don't care!

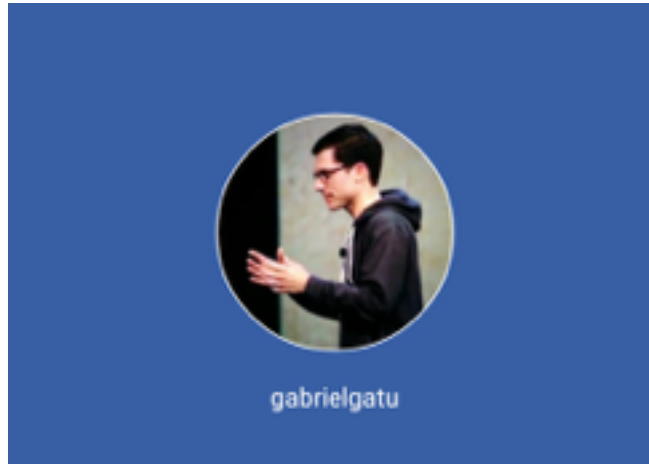

Meeting new people is the first step to new friends

You can talk with new people around, discuss about everything you like with them, but, when you feel a particular link, the best thing is to add them to you friend list! So, you'll always know where to find them!

Also, why not to challenge them to play with you? So we integrated a "treasure hunt", for more just play!

The profile at the center of everything

Whenever you want to add a new person to friends or want to see the statistics about the number of photos or messages you can go to the profile page.

A minimalistic, blue-central page with all the informations you need, curated from the beginning just for you!

If you are watching your profile, then you can also edit your informations, like the username and the email, or, even, your profile image.

Always keep in touch with your best friends, see where they are and challenge them to funny games!
